DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Yamashita et al. (U.S. Publication Application 2003/0199616, hereinafter Yamashita).
3. Regarding claims 1, 4, 5, 7, and 9-11, Yamashita teaches a cement admixture comprising two polymers A and B wherein the polymer (B) is an oxyalkylene group or polyoxyalkylene group and carboxyl group-containing polymer [0019]. Also, the cement admixture wherein the constituent unit (III) derived from an unsaturated monocarboxylic acid ester monomer (c) is a constituent unit (IV) derived from a (poly) alkylene glycol mono(meth) acrylic acid ester monomer [0028].

wherein R³ and R⁴ are the same or different and each represents a hydrogen atom or a methyl group, the p R⁵O groups are the same or different and each R⁵O represents an

oxyalkylene group containing 2 to 18 carbon atoms, p is a mean addition number of moles of the oxyalkylene groups and represents a number of 1 to 500, and R⁶ represents a hydrogen atom or a hydrocarbon group containing 1 to 30 carbon atoms [0029]. The unsaturated (poly) alkylene glycol ether monomer used are mixtures of methoxy (poly) propylene glycol and methoxy (poly) butylene glycol allyl ether [0108]. The (poly)alkylene glycol mono(meth)acrylic acid ester monomer, which provides the constituent unit is used as the unsaturated monocarboxylic acid ester monomer wherein p is not less than 2 and R⁶ is a hydrogen atom such as polypropylene glycol mono(meth)acrylate and polybutylene glycol mono(meth)acrylate [0115].

4. Regarding claim 2, Yamashita teaches the cement admixture wherein the ratio of the acid value of the polymers is 0.4-3.0 [0078].
5. Regarding claim 3, Yamashita teaches the polymers of the cement admixture having a molecular weight of 10,000 [0166].
6. Regarding claim 6, 8, and 12, Yamashita teaches the cement admixture the ratio between the polymers (A) and (B), namely the mixing ratio (polymer (A)/polymer (B)) (% by mass), is 1 to 99 and 99 to 1 [0167, 0186].
